PROJECT REPORT

Name: Arnav Gulyani

Reg. No: 25BCE10374

Year: First Year

Branch: Computer Science (Core)

TASK 1

In the Task 1, I used Canva to develop my infographic for digital literacy. I chose a pre-designed template and then proceeded to add the necessary information based on my own knowledge of the subject. The design is such that it aims to explain the concept of digital literacy in a simple yet visually appealing manner. It includes key areas such as internet safety, professional presence, and email etiquette. I used short bullet points and icons to make the information easy to read and comprehend at a glance.

While working on this infographic, I thought it was interesting to see how visual aspects such as colors and icons make the information look appealing and easy to comprehend compared to plain text. One of the issues I faced while working on this assignment is how to add the necessary information without making the layout look cluttered or messy. I had to make sure I added sufficient information without making the layout look cluttered or messy.

TASK-2

For Task 2, I have created profiles on GitHub, LinkedIn, and ResearchGate. GitHub is a software development platform, primarily used for hosting and sharing code, and for developers to collaborate on projects and track their progress. I intend to use this platform for the next four years by uploading my coding projects, familiarizing myself with version control, and developing a rich technical portfolio. LinkedIn is a professional networking tool through which students can connect with their peers, professionals, and recruiters. I intend to use LinkedIn for the next four years by showcasing my academic journey, skills, and achievements, and by exploring opportunities for internships and jobs in the future. ResearchGate is used by researchers and students primarily to share their academic work, papers, and research findings. I have chosen this platform because I intend to explore academic content, papers, and research findings, and get familiar with how academic research is carried out in the field of computer science.

I intend to use all these platforms for the next four years by regularly updating my profiles, sharing my work, and learning from others. These platforms will be helpful in developing a rich online presence and preparing me for future opportunities.

TASK-3

For Task 3, I made use of Google Forms and a coding practice tool to carry out the task. In Google Forms, I created a Digital Literacy Awareness Quiz with five questions of different types, including multiple-choice and short-answer questions. Through this, I was able to get a feel of how one can create simple quizzes and how responses can be effectively captured. Furthermore, I was able to get a feel of how responses are automatically captured and organized in a connected Google Sheet, which would be beneficial for data analysis.

I was also able to use a coding tool to practice basic coding skills by completing a coding challenge at a beginner level. Through this, I was able to get a feel of how coding platforms work and how one can use them to enhance logical thinking skills.

TASK-4

A situation where digital communication was poor, leading to the creation of a problem, can be described in the following scenario: A student sent an email to the professor, but the communication was poor because the language was casual, and the details regarding the assignment were not clearly stated. The email lacked a proper subject line, greeting, and explanation, leading to confusion, where the professor took time to respond to the email, causing the student to miss important information, thus creating difficulty in completing the assignment on time.

This situation could have been avoided if the student had followed the right etiquette for writing an email. The student could have sent an email with the right subject line, language, and explanation regarding their concern. It is important to be professional in digital communication because it will help in creating the right impression, so the communication will be clearly understood.

TASK-5

During the process of completing this task, I was surprised by how easily people can become victims of cybercrimes such as UPI frauds by means of simple schemes like fake calls or payment requests. It was also interesting to see how easily money can be lost by not being cautious while dealing with online transactions.

This task has made me more cautious about my online behavior. In the future, while dealing with payment requests, I would be more cautious and ensure that the authenticity of the messages or calls related to financial transactions is verified. Also, it would be a habit for me to not disclose any sensitive information to anyone. It was a learning experience for me to see how important it is to be cautious while dealing with online behavior.
